Process Pain Signals	11/15
Buyer Titles Present	8/10

Top 5 Process Intelligence Use Cases to be Mined

1. Claims intake to settlement cycle time. Life, disability and group benefits claims traverse intake, adjudication, medical review, and payout across Guidewire-style cores and a patchwork of legacy admin systems. Cycle-time variance is the #1 driver of NPS deterioration and regulator complaints in Canadian and US insurance. AFPI mines the full claim event log to expose loop-backs, hand-offs, and adjudicator variance, then routes automation to the two or three variants that consume 60%+ of the queue. Metric moved: average days-to-settle and rework rate. Engage the Chief Claims Officer and the VP Operations, Manulife Canada .
2. New business underwriting and policy issuance. Manulife has publicly committed to accelerated underwriting for John Hancock and Canadian life segments, but rules engines and third-party data pulls (MIB, Rx, labs) still produce weeks-long tails on non-straight-through cases. AFPI reconstructs the underwriter's actual workflow versus the target STP path and pinpoints where evidence gathering stalls. Metric moved: STP rate and application-to-issue days. Engage the Chief Underwriter .
3. Contact center servicing and complaint handling. Policyholder servicing across Canada, US (John Hancock), and Asia sees repeat contacts on beneficiary changes, address updates, and premium disputes. Each repeat call is a broken process, and each complaint carries a regulatory clock (OSFI, state DOIs, HKMA). AFPI plus Agentforce Operations mines call and case event data to identify the top five servicing journeys generating rework, then puts an agent on the two highest-ROI ones. Metric moved: first-contact resolution and repeat-contact rate. Engage the Head of Customer Operations .
4. Group benefits enrollment and plan changes. Group insurance is Manulife's fastest-growing Canadian segment, and open-enrollment periods stress the mid-office with high-touch employer changes, eligibility updates, and premium reconciliations. Errors here flow directly to broker escalations and lost mandates. AFPI mines the enrollment-to-invoice process to find the exception paths that eat the margin, and Compliance Center anchors the change-audit trail plan sponsors expect. Metric moved: enrollment error rate and broker-escalation volume. Engage the Head of Group Benefits, Canada .
5. Advisor onboarding and licensing operations. Manulife's advisor and MGA channel requires KYC, licensing verification, contract execution, and product training before any advisor can

transact ? a process that today takes weeks and is a documented drag on distribution productivity. AFPI mines the onboarding conformance path against target SLAs and shows exactly where compliance holds, contract redlines, or license checks stall the pipeline. Metric moved: advisor time-to-first-sale and channel activation rate. Engage the Head of Advisor Services .
