

The Bank of New York Mellon Corporation ? AFPI POV

My POV Library ?

The Bank of New York Mellon Corporation

Financial Services, Custody & Asset Servicing

Revenue: \$17.5B | Employees: ~50,000 | HQ: New York, NY, US

Current Salesforce Products: Sales Cloud (Own + Platform licenses per active renewal)

Current Non-Salesforce Systems: Not confirmed [field verify with BNY CIO office]

Relevant Open Opps: BNY Mellon Renewal 1392 Own, 425 Platform (\$21k)

AFPI AE: Charlie Stuard

Sales Motion: Co-Sell with Agentforce Operations

Propensity to Buy: 74/100 ? T2 Develop

Category

Score

Vertical fit (regulated FinServ, custody, capital markets)

18/20

Process complexity & volume (T+1, corporate actions, KYC)

14/15

Compliance regime (SEC, OCC, FRB, DORA, MiFID II)

13/15

Digital transformation posture (AI-first strategy, Vela platform)

12/15

Salesforce footprint depth & expansion signal

7/15

Top 5 Process Intelligence Use Cases to be Mined

1. Client Onboarding & KYC Refresh for Institutional Custody. BNY onboards asset managers, sovereign wealth funds, and corporate treasuries into custody, fund accounting, and collateral services ? a multi-week workflow spanning legal, tax, AML, and account-provisioning teams. The pain is a stubborn 30-90 day onboarding cycle that delays revenue recognition and drives client-satisfaction complaints during periodic KYC refresh cycles. AFPI mines the actual case-management event log (Sales Cloud + core onboarding systems) to expose hand-off delays, rework loops, and exception paths, then Agentforce automates document chase and status updates. The metric that moves is time-to-first-transaction and analyst throughput per FTE ? engage Akash Shah , Chief Commercial Officer.

2. Corporate Actions Processing at Scale. BNY processes millions of corporate actions annually across mergers, dividends, tenders, and rights offerings ? each with narrow deadlines and enormous downstream P&L consequence if missed. The pain is that a single missed election or misapplied entitlement can cost seven figures and trigger client escalations, and the process today mixes SWIFT feeds, custody platforms, and manual reconciliation. AFPI mines the end-to-end event log to surface stuck cases, exception clusters, and SLA breaches, then Agentforce triages by risk while a Compliance-Center wedge audits every override. The metric moved is exception rate and SLA adherence ? engage Bridget Engle , Chief Operations & Technology Officer.

3. Collateral Management & Margin Call Workflow. As one of the world's largest tri-party collateral agents, BNY moves trillions in collateral daily between dealers, clearing houses, and buy-side clients, all under Basel III and UMR margin rules. The pain is that intraday margin calls and disputes still require analyst intervention, and root-cause analysis of failed pledges is slow. AFPI mines the margin-call and settlement event log to identify recurring dispute patterns and slow counterparties, then Agentforce drafts responses and escalates by exposure. The metric moved is dispute resolution time and capital efficiency ? engage Emily Portney , Global Head of Asset Servicing.

4. Fund Accounting NAV Production & Exception Handling. BNY strikes daily NAVs for tens of thousands of funds across Investment Services ? a tightly-scheduled pipeline where any pricing, corporate-action, or reconciliation break can delay strike and breach client SLAs. The pain is a growing exception queue driven by increasingly complex private-market funds, plus rising

audit and DORA operational-resilience obligations. AFPI mines the NAV-production pipeline (Eagle, InForm, Nexen event logs) to spotlight the recurring 20% of breaks causing 80% of delays, then Agentforce auto-routes and pre-drafts break commentary. Metric moved is on-time NAV percentage and cost per NAV ? engage Roman Regelman , Head of Securities Services & Digital.

5. Regulatory Reporting & Control Attestation (Compliance Center wedge). BNY files hundreds of regulatory reports across SEC, OCC, FRB, DORA, MiFID II, and jurisdictional peers ? each requiring evidenced controls, sign-offs, and reconciliations to source. The pain is the swelling cost of first-line control testing and the audit burden when regulators demand end-to-end process evidence with no ambiguity. AFPI's Compliance Center overlays mined process reality against declared controls, flagging deviations and auto-producing regulator-grade audit trails; Agentforce accelerates SOX and DORA attestation cycles. Metric moved is control-testing cost and audit-cycle time ? engage Jayee Koffey , Global Head of Enterprise Change & Regulatory Affairs.
