

The Depository Trust & Clearing Corporation ? AFPI POV

My POV Library ?

The Depository Trust & Clearing Corporation

Financial Services, Post-Trade Market Infrastructure

Revenue: \$2.7B | Employees: ~1,941 | HQ: New York, NY, US

Current Salesforce Products: Not confirmed [field verify with account team]

Current Non-Salesforce Systems: Not confirmed [field verify with account team]

Relevant Open Opps: DTCC - Core - Agentforce - AELA (\$1.0M)

AFPI AE: Charlie Stuard

Sales Motion: Co-Sell with Agentforce Operations

Propensity to Buy: 78/100 ? T2 Develop

Category

Score

Vertical fit (regulated FS / post-trade)

14/15

Process complexity & volume

13/15

Compliance & audit pressure

13/15

Active Salesforce footprint / open Agentforce opp

12/15

Buyer titles present (COO, CRO, Ops)

10/15

Top 5 Process Intelligence Use Cases to be Mined

1. Trade Settlement Exception Handling (T+1 & Beyond). DTCC clears and settles the vast majority of US equities and fixed-income trades daily through NSCC, FICC, and DTC ? with T+1 now live in the US and pressure building for T+0, every settlement exception is expensive latency risk. AFPI mines the end-to-end trade lifecycle across NSCC/CTM/ITP event logs to expose the exception patterns, hand-off delays, and manual rework loops that erode straight-through-processing rates. The play is to co-sell alongside the open Agentforce AELA opportunity: AFPI supplies the process evidence, Agentforce Operations executes the remediation agents on the exceptions AFPI surfaces. Metric moved: STP rate lift, exception cycle-time reduction, reduction in manual break resolution FTE ? engage Lynn Bishop (CIO / Managing Director) or the Head of Clearing Operations.

2. Regulatory Reporting & SDR / GTR Workflows. DTCC operates the Global Trade Repository and Swap Data Repository ? meaning it is simultaneously a regulated entity and the regulator's data plumbing for CFTC, ESMA, MAS, and JFSA reporting. AFPI mines the reporting workflows to prove control effectiveness, spot late/failed submissions, and produce audit-grade process evidence ? the Compliance-Center wedge is a direct fit here for CAT, EMIR REFIT, and DORA obligations. AFPI shortens control-testing cycles from quarters to weeks and gives the CRO a live conformance dashboard the auditors can consume. Metric moved: reporting-error rate, control-testing cost, regulator remediation cycle time ? engage Timothy Cuddihy (Group Chief Risk Officer) or the Head of Regulatory Operations.

3. Client Onboarding & KYC/AML for Institutional Members. Onboarding a new clearing member, fund, or omnibus account at DTCC touches legal, credit, KYC/AML, connectivity, and testing ? a multi-week journey with dozens of hand-offs across teams. AFPI mines the onboarding case flow (which can be surfaced through Service Cloud plus supporting systems) to expose bottlenecks, rework loops, and SLA breaches; Agentforce Ops then executes the standard steps AFPI proves are safe to automate. This is the fastest-time-to-value co-sell against Agentforce because the process is bounded, the data is captured, and the pain is quantified. Metric moved: onboarding cycle time (days), first-time-right rate, ops cost per new member ? engage Nikki Poulos (General Counsel & Managing Director) or the Head of Client Services.

4. Corporate Actions Lifecycle Standardization. Corporate actions ? dividends, mergers, tenders, redemptions ? remain one of the most error-prone processes in post-trade, and DTCC's

ISO 20022 CA transformation is a multi-year program to industrialize it. AFPI mines the CA event lifecycle across CA Web, GCA VS, and downstream member workflows to identify where announcements, elections, and allocations diverge from the target model, and quantifies the cost of each break. This gives the transformation office an evidence base to prioritize automation and re-work targets, rather than a swag on where the money is bleeding. Metric moved: CA break rate, indemnification claims paid, transformation ROI proof ? engage Nadine Chakar (Managing Director, Digital Assets) or the Head of Asset Services.

5. Cyber & Operational Resilience Evidence (DORA-Ready). As a Systemically Important Financial Market Utility (SIFMU) DTCC is examined by the Fed, SEC, and CFTC on operational resilience; DORA extends the same regime to European counterparties DTCC serves. AFPI mines incident, change, and vendor-management workflows to produce continuous, auditable evidence of control operation ? collapsing the reactive spreadsheet drill into a live process view. The Compliance Center is the wedge: it takes the same event data AFPI is already mining and turns it into regulator-consumable attestations. Metric moved: attestation prep time, control-gap detection speed, resilience-test coverage ? engage Stephen Scharf (former CSO / cyber lead) or the current Chief Security & Resilience Officer.
