Top 5 Process Intelligence Use Cases to be Mined

1. First Notice of Loss to Claim Closure ? Personal & Small Commercial Auto. The FNOL-to-closure journey moves across the digital intake channel, adjuster triage, coverage verification, damage estimation, vendor dispatch, subrogation, and payout ? with state-DOI unfair claims practice clocks running the entire time. Straight-through-processing rates in P&C claims typically hide a long tail of files that cycle through reassignment and information-request loops that quietly consume the majority of adjuster capacity. AFPI mines the actual event log across the claims platform, the AI triage layer, and the payment system to expose the two or three loop patterns that drive rework, moving cycle time, LAE (loss adjustment expense) ratio, and DOI complaint volume. Engage the Head of Claims Operations as the operational champion.
2. Small Commercial Underwriting & Quote-to-Bind. The Hartford's small commercial franchise runs on speed ? the winning quote is often the first one back to the independent agent ? and quote-to-bind cycle time is the single biggest lever on hit-ratio. Behind the scenes the actual workflow ricochets between the agent portal, ordered third-party data (ISO, MVR, prior-carrier), the rating engine, and referrals to underwriters when a rule fires. AFPI produces the true process graph and exposes which referral rules, data-vendor latencies, or agency segments are structurally slowing the quote ? the metric moved is bind rate at the target service-level, and premium per underwriter FTE. Engage the Head of Small Commercial Underwriting .
3. Group Benefits Absence & Disability Case Management. The Hartford is a top-three US carrier in group disability, absence management, and paid family leave ? a business where the "process" is a case that lives for weeks or months across intake, medical review, employer coordination, and periodic re-adjudication. State PFML mandates keep multiplying and each one has its own eligibility clock and appeal SLA. AFPI ingests the case-management event log and surfaces where cases stall against statutory clocks and which case segments generate disproportionate rework, moving benefit-decision cycle time, appeals-overturn rate, and PFML compliance exceptions. Engage the Head of Group Benefits Operations .
4. Policy Servicing & Endorsement Processing (Commercial Middle Market). Once a commercial

policy binds, the real cost sits in mid-term endorsements ? added vehicles, changed limits, new locations, certificate requests ? that flow across the agent portal, service centers, and underwriting for anything material. Endorsement backlogs and re-work drive agent NPS almost as much as claims do, and are invisible in the policy admin system's canned dashboards. AFPI maps the full endorsement lifecycle event log, isolates the endorsement types and agency segments that consistently generate the worst cycle-time outliers, and quantifies the servicing-cost-to-premium ratio by segment. Engage the Head of Middle Market Operations .

5. SOX & Model Risk Compliance ? Reserving and Actuarial Process Attestation. As an SEC-registered insurer, The Hartford operates under SOX Section 404 for financial reporting and NAIC Model Audit Rule / Model Risk Management for actuarial models ? and every year the internal-audit and external-auditor teams reconstruct the actual process by which reserves, DAC, and reinsurance recoverables are calculated and reviewed. Today that reconstruction is largely interview-driven. AFPI turns the process-attestation exercise into a live artifact: the true event log across the actuarial workbench, reserving system, and financial close, with control points and segregation-of-duty breaks surfaced automatically. The metric moved is audit-cycle hours and Sarbanes control-deficiency findings. Engage the Chief Auditor and the Chief Actuary .
