

United States Department of Defense

Public Sector, Federal Defense & National Security

Budget: ~\$886B (FY2025) | Employees: 2,870,000 | HQ: Washington, DC, US

Current Salesforce Products: Sales Cloud (Govt Edition), Gov Cloud Premier Success, Service Cloud Portal, Force.com Unlimited

Current Non-Salesforce Systems: Not confirmed - likely SAP ERP, Oracle FBMS, GFEBS

Relevant Open Opps: CDAO ADVANA data modernization (\$280K)

AFPI AE: No AFPI AE assigned - Public Sector channel required

Sales Motion: Co-Sell with Agentforce Operations (via Missionforce National Security)

Propensity to Buy: 24/100 - T4 Deprioritize

Process-Pain Intensity: 9/15 | Transformation & AI Momentum: 8/12

Salesforce Footprint: 7/12 | Industry/Vertical Priority: 5/15

Commercial Event/Trigger: 4/10

Red-flag deductions: -15 (no Public Sector AE; FedRAMP/IL4 required; FAR procurement)

Why AFPI Cannot Pursue This Account Today

The US Department of Defense has genuine, massive process complexity - \$886B annual spend, 2.87M personnel, and procurement/logistics/maintenance across every military branch. The process mining opportunity is real. The sales path is not.

1. No AFPI territory coverage. The AFPI AE map covers commercial North America, EMEA, ANZ, and APAC. No Public Sector AE exists. Engagement must route through Missionforce National Security before any commercial AFPI play can be attached. [Org62]
2. Government cloud authorization barrier. DoD operates on US Government Cloud with FedRAMP High and IL4/IL5 requirements. AFPI needs separate FedRAMP authorization - a multi-year certification path, not a sales cycle blocker. [Web]
3. Federal procurement model. All Org62 opps are Informatica/INFA data platform deals through federal contracting vehicles (GWACs, ELAs). The commercial AFPI GTM motion does not translate to FAR-compliant federal acquisition. [Org62]
4. No commercial champion identified. CIO Timothy Paul [Org62] is the only senior contact on record, with no VP Operations/Transformation reachable commercially.

The Signal Worth Monitoring

Missionforce National Security + Agentforce. In June 2026, Salesforce closed a \$72M ELA with the US Air Force (a DoD sub-agency) for Missionforce National Security. The Air Force is piloting Agentforce for aircraft maintenance and deployment orders - exactly the process-mining use case AFPI supports. [Slack/#media-coverage, 2026-06-10]

If AFPI is bundled into Missionforce National Security, the Air Force Agentforce pilot becomes a direct entry point. The CDAO ADVANA initiative (\$280K, Stage 03) signals

data infrastructure investment that could eventually support event-log-based mining.

What Would Need to Change

- AFPI achieves FedRAMP Moderate/High authorization or is bundled into Missionforce.
- A Public Sector AFPI AE is designated with a federal contracting vehicle.
- The Air Force Agentforce pilot requests a process-map to guide agent deployment.

Recommended handoff: Share the Air Force Agentforce pilot signal with the Missionforce
National Security team. Flag CDAO ADVANA as a data-readiness indicator.
