My POV Library ?

## CenterPoint Energy, Inc.

Utilities, Electric & Natural Gas Distribution

Revenue: \$12.3B (Org62) | Employees: 14,000 | HQ: Houston, TX, US

Current Salesforce Products: Not confirmed [field verify with Charlie Stuard]

Current Non-Salesforce Systems: SAP S/4HANA (WAM), Regrello

Relevant Open Opps: CenterPoint Energy - SAP S4 WAM Program & Systemwide Resiliency Plan POV (

\$3.0M ) | CenterPoint Energy - Regrello ( \$1.5M ) | Resiliency Planning RFP ( \$975k ) |

CNP - Regrello ( \$700k ) | Agentic Analytics Big Bet ( \$576k ) | Stakeholder Relationship

Management ( \$200k )

AFPI AE: Charlie Stuard

Sales Motion: Co-Sell with Agentforce Operations

Propensity to Buy: 92/100 ? T1 Pursue

Category

Score

Signal density (SAP S/4 WAM, Regrello, Resiliency, Agentic Analytics all in-flight)

15/15

Process pain (post-Beryl storm hardening, PUC scrutiny, WAM cutover)

14/15

Firmographic fit (\$12.3B rev, 14k employees, regulated utility)

14/15

Timing (SAP S/4 program mid-flight ? process discovery gold)

9/10

Vertical fit (Utilities, regulated T&D)

12/15

### Top 5 Process Intelligence Use Cases to be Mined

1. SAP S/4HANA Work & Asset Management (WAM) Cutover Assurance. The \$3M WAM program is the highest-stakes ERP transformation CenterPoint has run in a decade ? work order creation, dispatch, meter-to-cash, and asset lifecycle all move. Without event-log-based process discovery, cutover teams rely on interview-based TO-BE maps that miss 30-40% of real variants (emergency work orders, mutual-aid crews, storm exceptions). AFPI mines the actual SAP + legacy CIS event logs to expose every variant before go-live, cutting stabilization cost by 15-25% and moving hypercare from 12 to 6 weeks. Engage Jason Ryan (CIO) as executive sponsor.

2. Systemwide Resiliency & Storm Response Orchestration. After Hurricane Beryl, Texas PUC and the Governor's office put CenterPoint's outage-restoration process under a microscope ? average restoration time, crew dispatch, damage-assessment cycle, and stakeholder comms all became reportable metrics. AFPI mines the end-to-end restoration process across OMS, GIS, WFM, and CIS to expose bottlenecks (crew staging delays, damage-assessment rework, mutual-aid onboarding friction) and quantify what a 10% faster restoration is worth in avoided customer-hours-lost.

Metric moved: SAIDI/SAIFI, mutual-aid mobilization time. Engage Darin Carroll (SVP, Electric Business).

3. Regrello Workflow ? Process Baseline Before You Automate. Two active Regrello opps (\$1.5M + \$700k) signal CenterPoint is standardizing cross-functional workflows ? but automating a broken process just makes it break faster. AFPI runs discovery FIRST on the target workflows (permitting, vendor onboarding, capital-project intake) to map the actual paths, exception loops, and handoff friction. Regrello then automates the validated happy path, and AFPI continuously monitors conformance. Metric moved: cycle time, first-pass yield, rework rate.

Champion: Amy Sedgwick (VP, Business Transformation) or the digital-transformation lead.

4. Regulatory Rate-Case & Compliance Evidence Automation. CenterPoint files continuously with PUC Texas, MPUC (Minnesota), and Indiana URC ? every rate case, storm-cost recovery filing, and prudence review demands defensible evidence of operational efficiency. Compliance teams spend thousands of hours pulling logs and building narratives. AFPI's Compliance Center wedge produces continuously-updated, audit-grade process evidence for every regulated workflow

(outage response, capital deployment, safety inspections), collapsing rate-case prep from months to weeks. Metric moved: rate-case cycle time, prudency approval rate. Engage Monica Karuturi (EVP & General Counsel).

5. Meter-to-Cash & Customer Move-In/Out Cycle. With 7M+ metered customers across gas and electric, move-in/move-out, billing exceptions, and payment plan workflows are high-volume, high-friction, and touch Salesforce/CIS/AMI. AFPI mines the meter-to-cash event log to quantify billing rework, days-sales-outstanding, and self-service leakage. Directly feeds the Agentic Analytics Big Bet (\$576k opp) ? AFPI supplies the process ground truth, Agentforce automates the top variants. Metric moved: DSO, cost-to-serve per customer, self-service containment.

Champion: Kenneth Coleman (SVP, Customer Transformation) or the customer-ops lead.
